Basil Hospitality GHG Dashboard

- **Reporting Period -** 1stApril2025-31st March2026
- **Report Prepared by -** Gcarbon Private Limited
- **Organization Boundary -** Operational control approach
- **Reporting Boundary -** Scope 1,2 & selected scope 3
- **Baseline year -** Not this year because of data gaps
- **Reporting Period -** 1stApril2025-31st March2026
- **GHG protocol -** GHG protocol corporate accounting & reporting standard

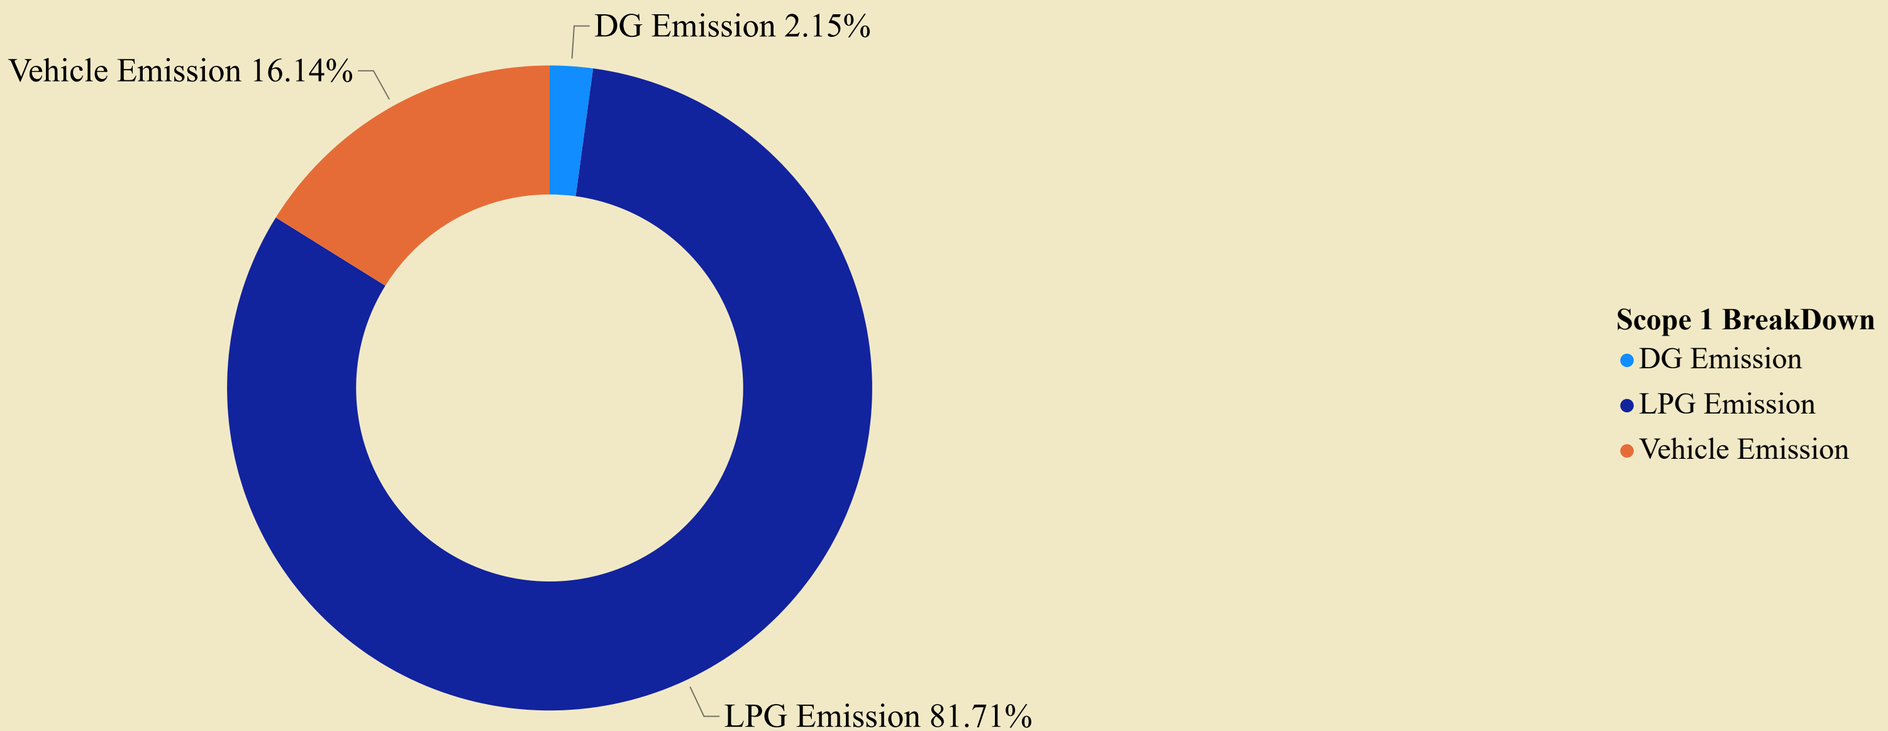

2.92K	834.17	184.55	1.90K
Total GHG Emission	**Total Scope 1 Emission**	**Total Scope 2 Emission**	**Total Scope 3 Emission**

Basil Hospitality GHG Dashboard Scope -1

834.17	681.61	134.61	17.96
Total Scope 1 Emiss...	LPG Emission	Vehicle Emission	DG Emission

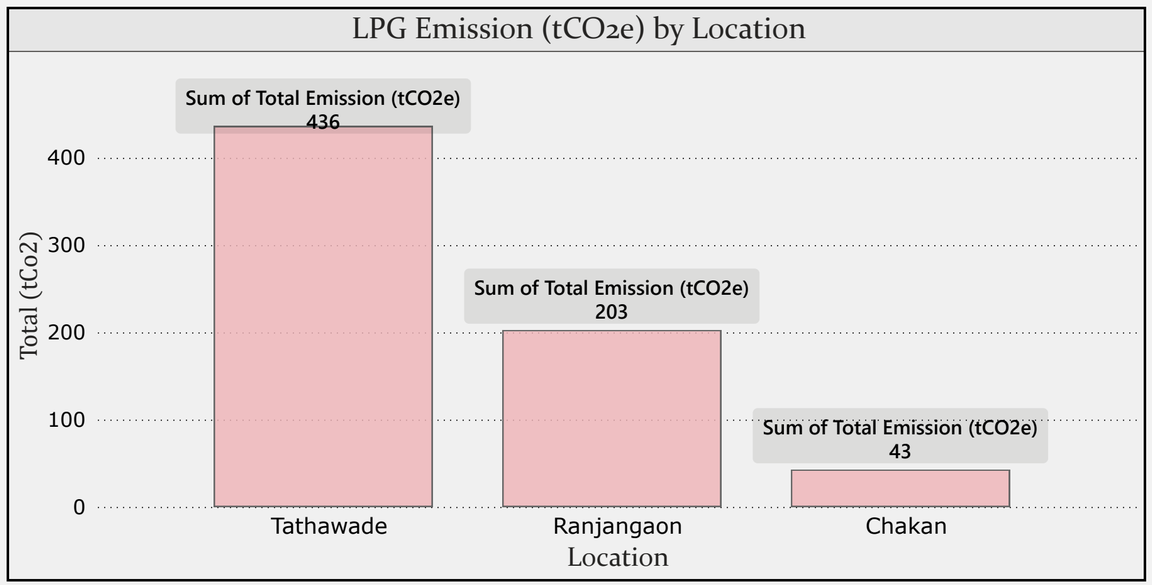

Total Emission Scope wise Breakdown

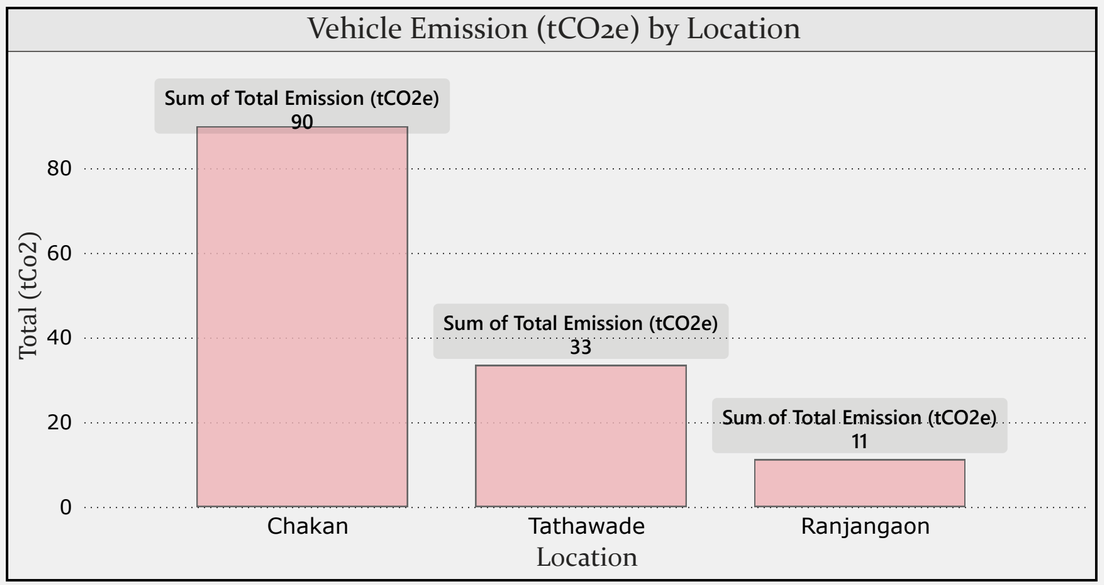

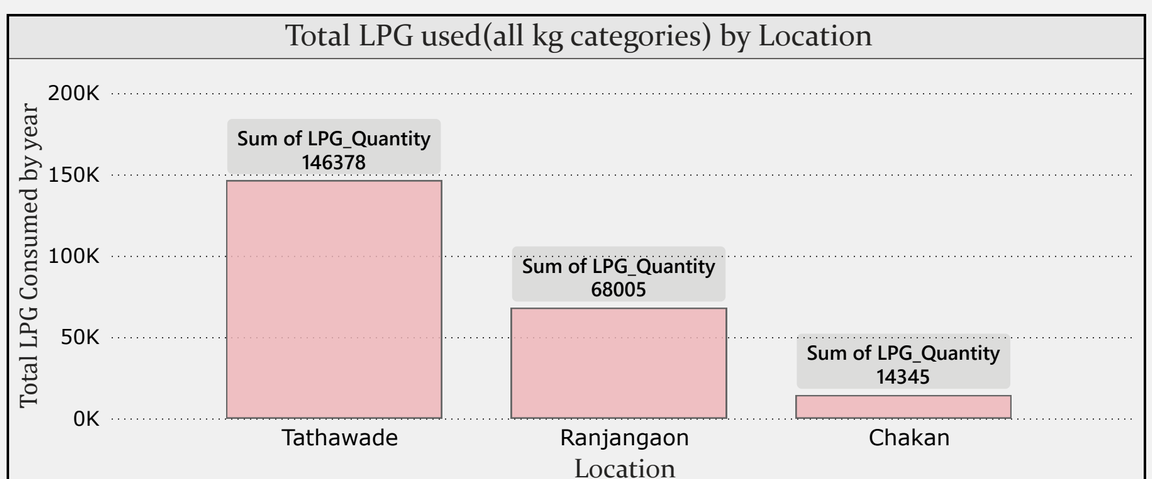

Total LPG used in FY2025-2026 :

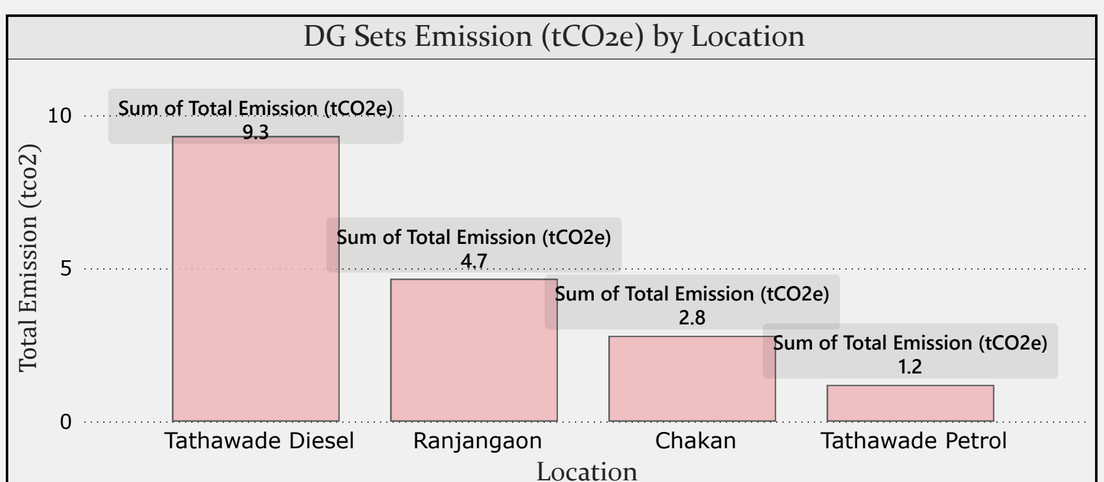

- **LPG - 228728 kg/year**

DG Sets ,LPG & Vehicle Emission

Sum of Yearly Emission (tCO2e)

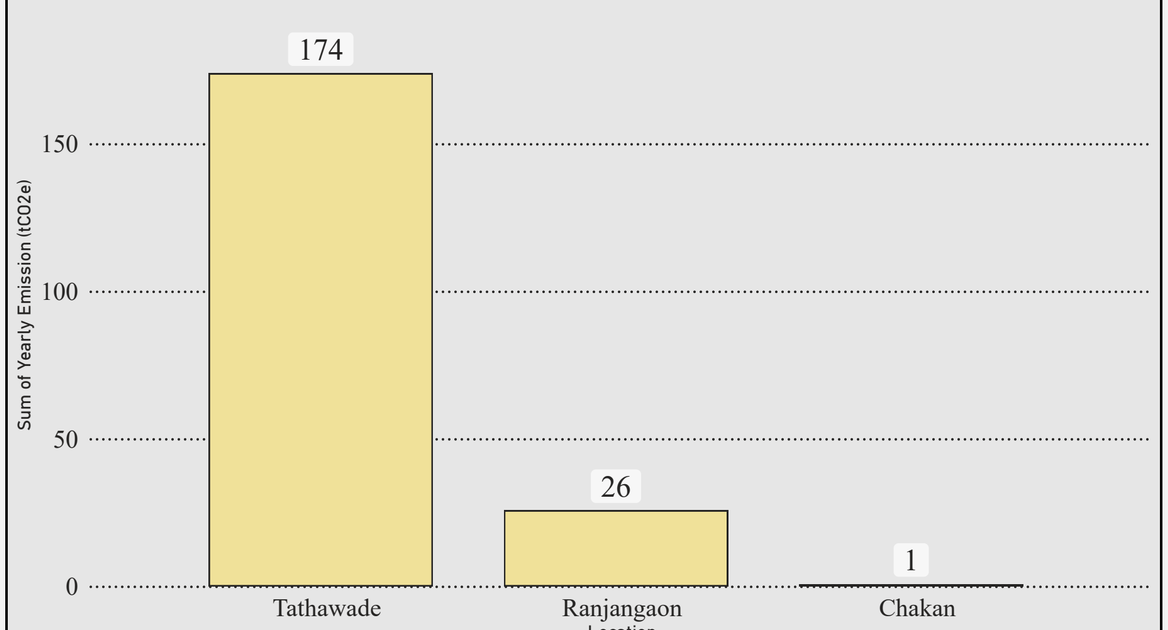

Waste Generation & Yearly Emission

Location	Sum of Yearly Wastage (kg)	Sum of Yearly Emission (tCO2e)
Chakan	62050	0.65
Ranjangaon	43800	25.67
Tathawade	547500	173.79
Total	653350	200.11

Employee commute Emission (tCO2e)

Wastage Yearly Emission (tCO2e) by Location

Mitigation Strategies - Scope 1

Scope 1 – Kitchen Thermal Efficiency (23.33%)

Install LPG Flow Meters
Explanation: The first step is to understand where LPG is being consumed. Installing LPG flow meters, starting with the Tathawade facility, will help monitor fuel usage across different kitchen areas.
Benefits:
- Identify fuel-intensive areas
- Detect unnecessary fuel consumption
- Improve LPG efficiency

Upgrade to High-Efficiency Burners
Explanation: Older burners consume more LPG. As existing equipment reaches the end of its life, it should be replaced with energy-efficient burners that provide the same cooking performance while using less fuel.
Benefits:
- Lower LPG consumption
- Reduced operating costs
- Lower carbon emissions

Perform Regular Burner Maintenance
Explanation: Burners that are not serviced regularly or have poorly adjusted flames waste fuel. Routine servicing and flame calibration ensure efficient combustion.
Benefits:
- Better fuel efficiency
- Reduced maintenance costs
- Lower emissions

Scope 1 – Distribution Transport (4.61%)

Optimize Delivery Routes
Explanation: Delivery routes should be planned more efficiently so that more deliveries are completed in fewer trips, especially for the Chakan operation.
Benefits:
- Reduced fuel consumption;
- Lower transportation costs;
- Lower emissions

Review the Highest-Emitting Vehicle
Explanation: One rental vehicle contributes the highest transport emissions. Its performance should be reviewed to determine whether it can be replaced or operated more efficiently.
Benefits:
- Significant emission reduction
- Fuel savings

Shift to EVs or CNG Vehicles
Explanation: Short and predictable delivery routes can gradually be shifted from conventional fuel vehicles to electric or CNG vehicles.
Benefits:
- Cleaner transportation
- Reduced greenhouse gas emissions

Install Fuel Monitoring Systems
Explanation: Telematics and fuel monitoring systems can track actual fuel consumption and vehicle performance.
Benefits:
- Detect fuel wastage

Mitigation Strategies - Scope 2

Scope 2 – Electricity (6.32%)

Assess Rooftop Solar Installation
Explanation: The facilities have a stable electricity demand, making rooftop solar panels a practical option to generate renewable electricity.
Benefits:
- Lower electricity costs
- Increased renewable energy use
- Reduced Scope 2 emissions

Improve Refrigeration Efficiency
Explanation: Regular maintenance such as replacing door gaskets, cleaning condensers, and maintaining proper temperature settings can reduce electricity consumption.
Benefits:
- Lower energy use
- Better cooling performance

Replace Remaining Conventional Lights with LEDs
Explanation: Any remaining conventional lighting should be upgraded to LED lighting in kitchens, storage areas, and staff accommodation.
Benefits:
- Significant electricity savings
- Lower maintenance costs

Map Electricity Connections
Explanation: Each electricity connection should be linked to its operating location so that energy consumption can be monitored at the facility level.
Benefits:
- Better energy tracking

Mitigation Strategies - Scope 3

Scope 3-Value Chain Emissions 65.13% of Total Emissions

Category 1 – Procurement & Supply Chain (57.42%)

Engage Key Suppliers
Explanation: Work with major suppliers to collect product-specific carbon footprint data instead of estimated values.
Benefits:
- More accurate carbon accounting
- Better supplier collaboration
- Improved reporting quality

Review Menu Composition
Explanation: Reduce high-carbon ingredients where feasible.
Benefits:
- Lower supply chain emissions
- More sustainable food choices

Include Carbon Performance in Supplier Selection
Explanation: Consider environmental performance alongside price and quality.
Benefits:
- More sustainable procurement
- Long-term emission reduction

Increase Local & Seasonal Sourcing
Explanation: Purchase from local and seasonal suppliers.
Benefits:
- Reduced transport emissions

Category 5 – Waste Management (6.73%)

Divert Food Waste from Landfills
Explanation: Use composting, biomethanation, or animal feed instead of landfill.
Benefits:
- Up to 98% reduction in waste-related emissions;
- Better resource recovery

Expand Vegetable Waste Diversion
Explanation: Extend the existing initiative to Ranjangaon.
Benefits:
- Less waste sent to landfill

Reduce Plate Waste
Explanation: Review portion sizes and improve forecasting.
Benefits:
- Lower food waste
- Reduced procurement costs

Measure Waste More Accurately
Explanation: Weigh and record waste by stream.
Benefits:
- Accurate waste data
- Better decisions

Strengthen Waste Contractor Requirements
Explanation: Include diversion targets and reporting responsibilities.
